INSTRUCTIONS

Walnut Grove's School / Church with Stairs and Bell
H0 Scale (advanced) paper model

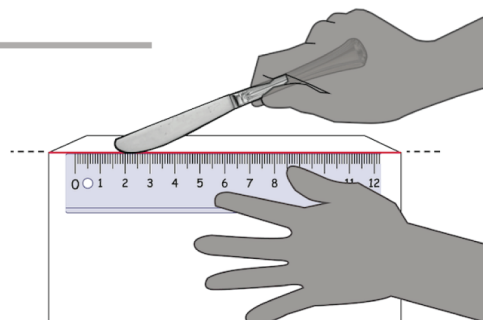

paperprairie.art.blog

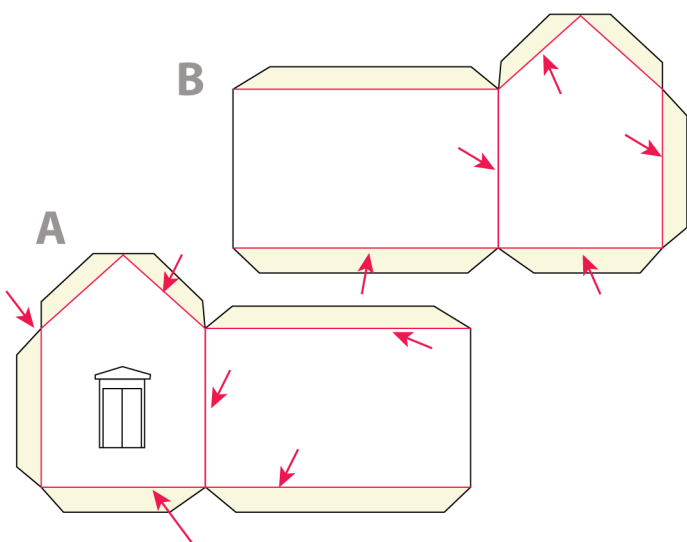

Materials: A medium sized sharp scissor, a hobby knife (with NEW blade!), a butter knife (smooth, no sharp edge!), white "school" glue and glue stick, a ruler and tweezers.

How to hand score paper before folding:

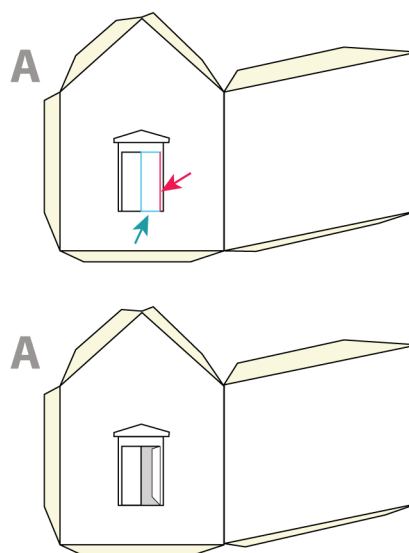

The easiest (and nicest!) way to fold paper, is by scoring the piece to be folded first. You will need a thin butter knife (not sharp but smooth knife!) and a ruler. Take a ruler and place it on the paper, over the line you would like to score. Using the thinnest part of the knife, press down firmly as you move along the length of the ruler and down the paper. The more pressure you exert, the deeper the score will be. Do this twice. When finished, simply remove the ruler and your paper is ready to be folded.

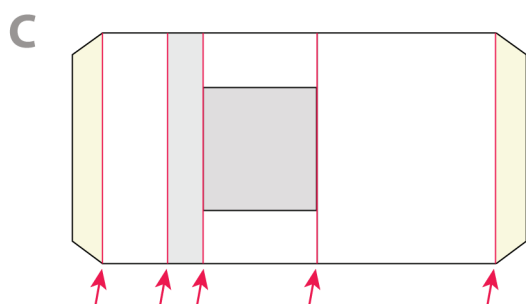

Cut out piece **A and B**, score and fold on the red lines:

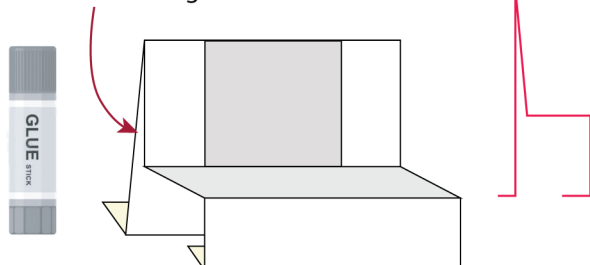

On piece **A**, Score and fold along the red line on the right door, and cut along the blue lines using your hobby knife. Then, open the door inward.

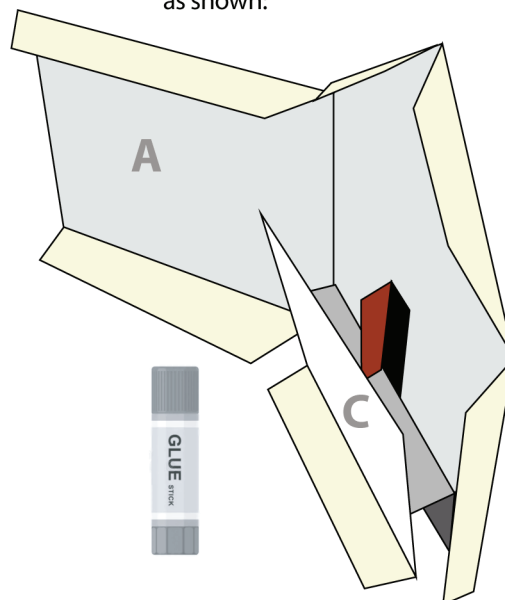

Cut out piece **C**, and score and fold on the red lines:

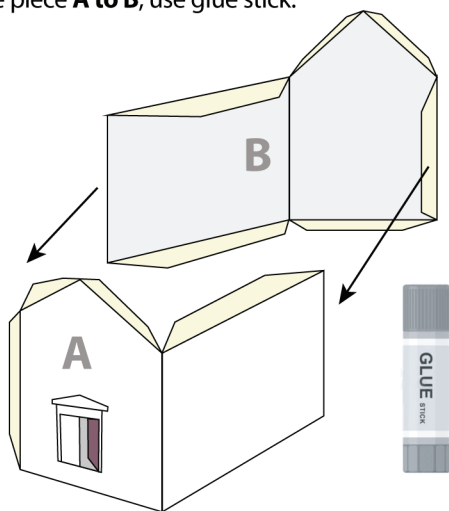

Fold as shown.
Glue here with glue stick.

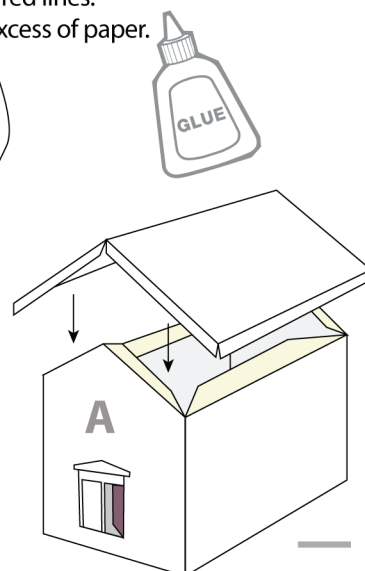

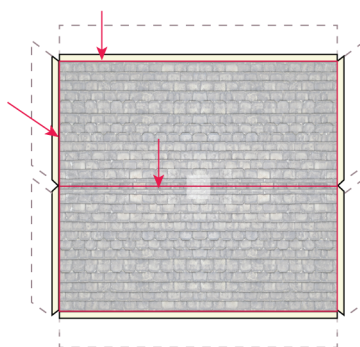

INSIDE piece **A**, glue piece **C** (under the open door) as shown:

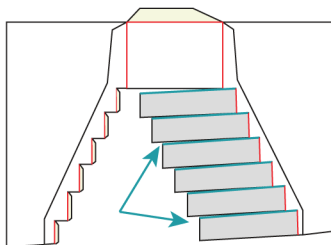

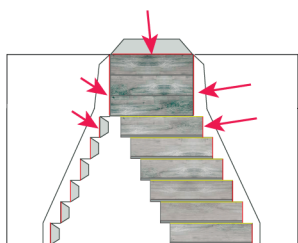

Glue piece **A** to **B**, use glue stick.

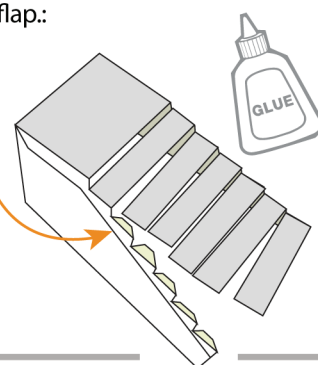

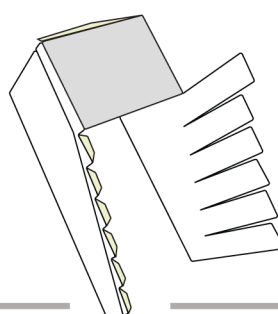

Cut **ROOF 1**, score and fold on the red lines.
After folding the borders, cut the excess of paper.
Glue over the "house" as shown.

Cut out **STAIRS 1**, score and fold on the red lines, cut along the blue lines (to separate each step):

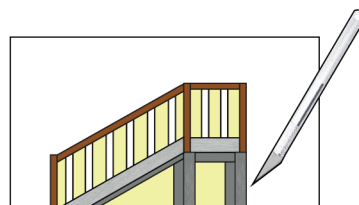

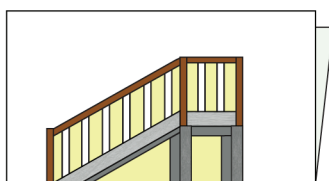

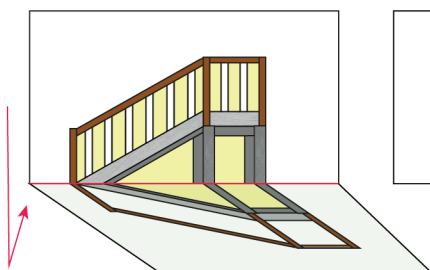

Fold the sides downward, and glue each step to the corresponding small flap:

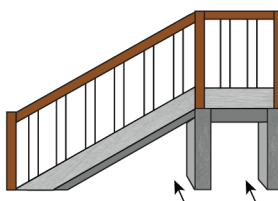

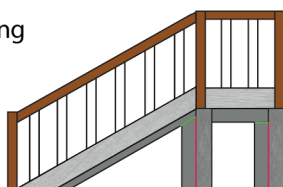

Cut out **STAIRS 2 & 3**, score and fold on the red line. Glue together with glue stick. Put some weight (a book?) over it, let it dry.

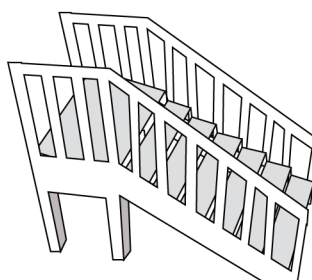

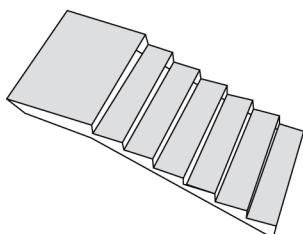

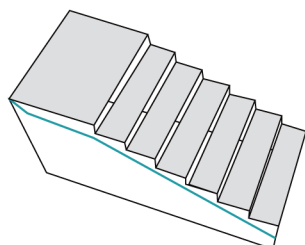

With the hobby knife, cut out all the yellow areas, and with the scissors the rest of the paper around the form.

Optional: Make an incision along the green line, then score and fold inwards along the red line.

Cut along the blue line, as shown:

Glue the side of the stairs on place.

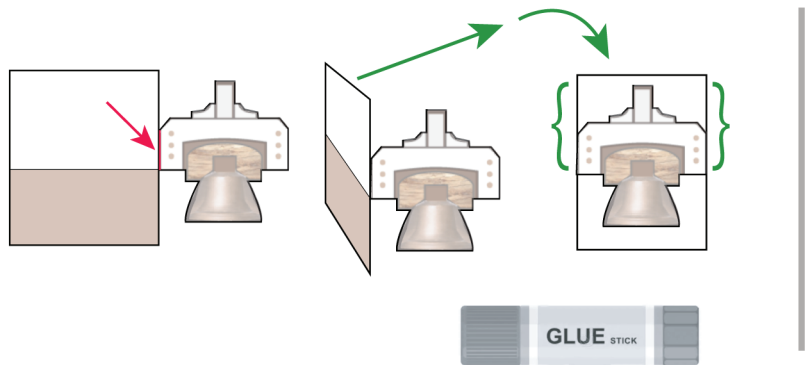

... and glue the stairs in front of the building.

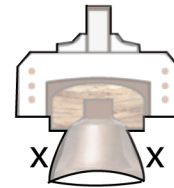

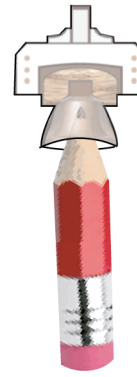

BELL -score and fold on the red line.
Glue the top part only (with glue stick).

NOTE
Do you have a magnifying glass?
Now is the time to use it! :D

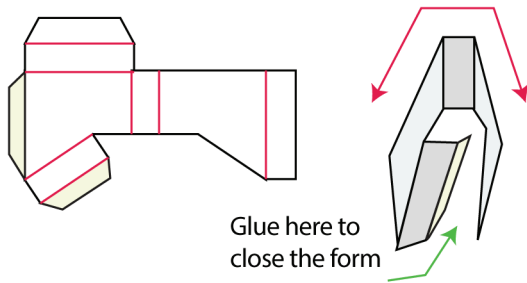

Cut around the form, with the hobby knife.

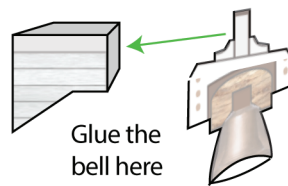

Use a pencil to shape the "bell" and glue on the sides only (x) to close the form.

BELL (base) Score and fold on the red lines:

Glue here to close the form

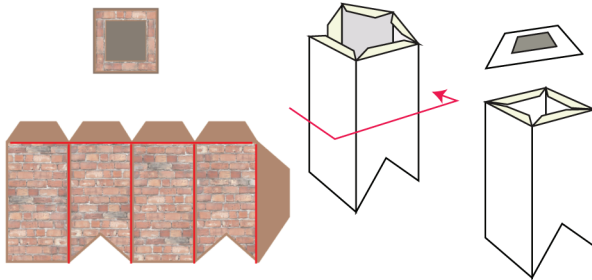

Glue the bell here

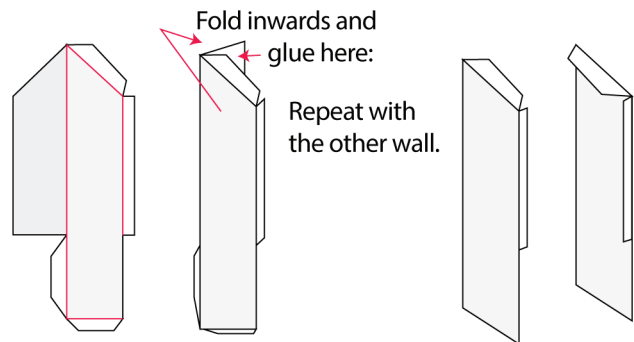

... and over the window:

(Use a double sewing thread as the pull for the bell.)

CHIMNEY Score and fold on the red lines.
Close the form and glue the top.

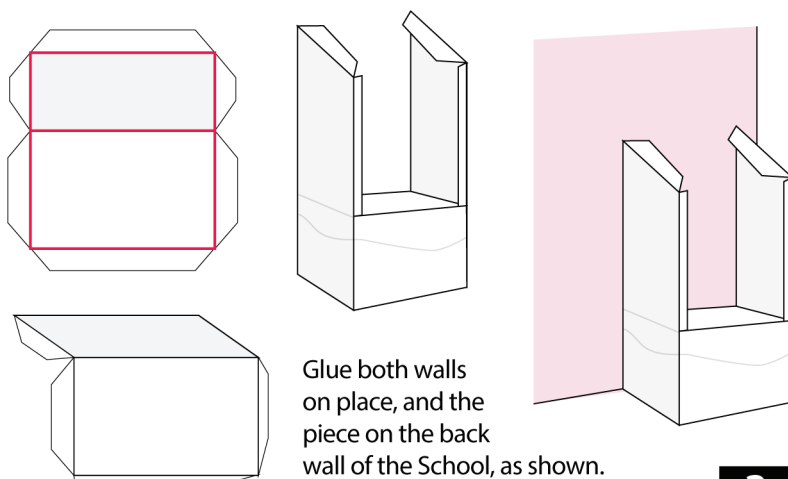

BACK PORCH WALLS A & B: Score and fold on the red lines:

Fold inwards and glue here:

Repeat with the other wall.

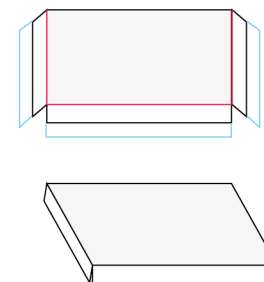

PORCH BASE Score and fold on the red lines:

Glue both walls on place, and the piece on the back wall of the School, as shown.

PORCH ROOF Score and fold on the red lines:

Glue on place as shown:

After folding, cut out excess of paper.
